Report on teaching sessions for students on medical, legal, ethical and social issues involved in organ transplantation.

During the different subject posting students are exposed clinical scenarios on organ transplantation.

According to The Transplantation of Human Organs Act, 1994, Forensic Medicine class in MBBS Phase II covers the medical and legal elements of organ removal and transplantation. In General Medicine organ specific transplantation classes are taken. Ophthalmology department ensures that students know about the consent form, how to take the consent and other relevant topics regarding eye and organ transplant. Students are divided into small groups and are actively involved in discussion of ethical aspects of human organ transplant. Seminars are being conducted by students themselves and presented in front of department staff. Under community medicine students have done a project on “Awareness and attitude on organ donation among non-medical staff of a tertiary care hospital”. OSCE and OSPE session about consent delivery and motivation towards organ transplant is being done by various departments.

Due to these continuous efforts in making the students aware of organ transplant the students union conducted a stem cell donation campaign in collaboration with “DATRI Blood Stem Cell Donors Registry”. Many students and staff took part in the campaign and donated their stem cell details. After about year one of our students could donate his matched stem cell for a needy patient.

Following methods are used to teach and assess:

- Didactic Lectures
- Small Group Discussion
- Seminars
- Projects
- OSCE/OSPE
- Case Based Scenario
